

Roy Kertzmann

Class: Expert

Origin: Human

Homeworld: industrial mining moon of Telyx-7

Goal: -

Level: 2

Background: Technician

Languages: Mandate

STR 8 +0

DEX 12 +0

CON 7 -1

INT 9 +0

WIS 14 +1

CHA 9 +0

HP 6

AC 13 vs TL3 weapons

AC 13 vs TL4+ melee weapons & firearms

Move 10m (Unencumbered)

Base Attack +1

System Strain max 7, permanent 0

Saving Throws:

Physical 14

Evasion 14

Mental 13

Attributes were rolled randomly (3d6 each, in order, set one to 14).

Class Abilities: Once per scene, you can reroll a failed skill check, taking the new roll if it's better.

Skills: Connect-1, Fix-1, Pilot-0, Talk-0

Foci: Diplomat-2, Tinker-1

Equipment

- **Readied:** Armored Undersuit, Backpack (TL 0), Dataslab, Laser Pistol, Monoblade Knife
- **Stowed:** Metatool, 4 x Power Cell (type A), 6 x Spare Parts, Toolkit (Postech)
- **Cached:** -
- **Credits:** \$200

Readied Items: 4 (Unencumbered: up to 4, Light Enc: up to 6, Heavy Enc.: up to 8)

Stowed Items: 8 (Unencumbered: up to 8, Light Enc: up to 12, Heavy Enc.: up to 16)

Armor

- **AC 13 vs low-tech (TL3 or lower) weapons:** Readied Armored Undersuit gives base AC 13
- **AC 13 vs high-tech (TL4 or higher) melee weapons and all firearms:** Readied Armored Undersuit gives base AC 13

Ranged Weapons

- **Laser Pistol:** +0 to hit, 1d6 dmg, rng 100/300, mag 10, ash or sand cloud applies up to a -4 to hit and halves range., TL 4, TL 4

Melee Weapons

- **Monoblade Knife:** -1 to hit, 1d6 dmg, Shock 1pts/AC15, TL 4, TL 4
- **Unarmed Attack:** -1 to hit, 1d2 dmg, Unarmed attacks always add the attacker's Punch skill to damage rolls, unlike other weapons., TL 0, TL 0

Foci

- **Diplomat:** You know how to get your way in personal negotiations, and can manipulate the attitudes of those around you. Even so, while smooth words are versatile, they'll only work if your interlocutor is actually willing to listen to you.
 - **Level 1:** Gain Talk as a bonus skill. You speak all the languages common to the sector and can learn new ones to a workable level in a week, becoming fluent in a month. Reroll 1s on any skill check dice related to negotiation or diplomacy.
 - **Level 2:** Once per game session, shift an intelligent NPC's reaction roll one step closer to friendly if you can talk

to them for at least thirty seconds.

- **Tinker:** You have a natural knack for modifying and improving equipment, as given in the rules on page 100.
 - **Level 1:** Gain Fix as a bonus skill. Your Maintenance score is doubled, allowing you to maintain twice as many mods. Both ship and gear mods cost only half their usual price in credits, though pretech salvage requirements remain the same.

Equipment Descriptions

- **Armored Undersuit:** An armored undersuit is a skin-tight bodysuit woven of advanced TL4 fibers with exceptional shock-activated rigidity and impact dispersion capabilities. Transparent panels allow for it to be worn with almost any outfit without drawing notice or being detected without a close tactile examination. (enc. 0)
- **Backpack (TL 0):** A worn backpack counts as a readied item, though objects stowed inside it still require the usual round to dig free. Characters without backpacks or similar carrying devices might have difficulty justifying the hauling of large amounts of gear. (enc. 1)
- **Dataslab:** A palm-sized computing device that can unfold into a thin slab roughly one-third of a meter on a side. It can perform all the functions of a compad or handheld computer and can communicate wirelessly with nearby devices. (enc. 1)
- **Laser Pistol:** Laser pistols are among the most common type of energy weapon, though pistols are considerably less energy-efficient than rifles. Depending on the tech used in the sector, they might produce silent, invisible beams of death or noisy, brightly-colored streaks of lethal light. The phased multifrequency beam is capable of penetrating any ordinary mist or haze, but a thick cloud of thermally-resistant particulate matter such as ash or sand can seriously degrade the beam, applying up to a -4 penalty to hit and cutting ranges in half. (enc. 1)
- **Metatool:** This wrist-mounted housing contains a myriad of small, useful tools designed to handle the widest possible range of technical needs. While a metatool is too limited to handle major jobs, it is usually sufficient to manage jury-rigged repairs and temporary fixes until the tech has time to apply a larger wrench to the problem. (enc. 1)
- **Monoblade Knife:** Small weapons are small one-handed implements no larger than a baton or knife. These weapons are easily concealed in normal clothing, and can even be kept Readied up sleeves or in tailored pockets. Many can be thrown at a range up to 10 meters. (enc. 1)
- **Power Cell, type A:** One of the few standardized artifacts inherited from before the Silence, power cells are small cylindrical objects designed to take and hold electrical charges. Type A cells are usually used for personal equipment, and the larger type B cells for vehicles and heavy gear. The engineering for the cells is substantially different, and they cannot be exchanged or recharge each other without a trained tech's modifications or a converter unit. Power cells can be recharged off a ship's power plant or other grid. Recharging requires 30 minutes for a type A cell. (enc. 1 for 3)
- **Spare Parts:** This is a general category for a number of small TL4 components and repair materials. While a simple toolkit or metatool is often enough to fix a damaged object, severely broken devices may need replacement parts. Rather than keep a catalog of bits and pieces, a technician can simply bring along one or more units of spare parts, subtracting one whenever the GM decides that a repair effort requires more than existing salvage can support. A unit of spare parts can also be used to jury-rig some basic, uncomplicated tool or weapon from the equipment list with ten or fifteen minutes of assembly and at least Fix-0 skill. Such bodged devices rarely last longer than one scene. (enc. 1 for 3)
- **Toolkit (Postech):** Containing a wide range of necessary tools for a particular skill set, toolkits can handle almost any job that doesn't require a full-scale shop or lab. A standard postech toolkit can handle electronics, small welding jobs, and basic repair on ordinary TL4 goods. (enc. 3)
- **Unarmed Attack:** Unarmed attacks reflect ordinary kicks and punches. Unarmed attacks always add the attacker's Punch skill to damage rolls, unlike other weapons. Kinesis wraps, spiked knuckles, and other small fist weapons may be treated as small advanced or primitive weapons that use the Punch skill and add the skill level to their rolled damage, but not to Shock. Such weapons do not augment a hero with the Unarmed Combatant focus. (enc. 0)

Skills

- **Administer (Untrained):** Manage an organization, handle paperwork, analyze records, and keep an institution functioning on a daily basis. Roll it for bureaucratic expertise, organizational management, legal knowledge, dealing with government agencies, and understanding how institutions really work.
- **Connect (Level 1):** Find people who can be helpful to your purposes and get them to cooperate with you. Roll it to make useful connections with others, find people you know, know where to get illicit goods and services, and be familiar with foreign cultures and languages. You can use it in place of Talk for persuading people you find via this skill.
- **Exert (Untrained):** Apply trained speed, strength, or stamina in some feat of physical exertion. Roll it to run, jump, lift, swim, climb, throw, and so forth. You can use it as a combat skill when throwing things, though it doesn't qualify as a combat skill for other ends.
- **Fix (Level 1):** Create and repair devices both simple and complex. How complex will depend on your character's background; a lostworlder blacksmith is going to need some study time before he's ready to fix that broken fusion reactor, though he can do it eventually. Roll it to fix things, build things, and identify what something is supposed to do.
- **Heal (Untrained):** Employ medical and psychological treatment for the injured or disturbed. Roll it to cure diseases, stabilize the critically injured, treat psychological disorders, or diagnose illnesses.
- **Know (Untrained):** Know facts about academic or scientific fields. Roll it to understand planetary ecologies, remember relevant history, solve science mysteries, and know the basic facts about rare or esoteric topics.
- **Lead (Untrained):** Convince others to also do whatever it is you're trying to do. Talk might persuade them that following you is smart, but Lead can make them do it even when they think it's a bad idea. Roll it to lead troops in combat, convince others to follow you, or maintain morale and discipline.
- **Notice (Untrained):** Spot anomalies or interesting facts about your environment. Roll it for searching places, detecting ambushes, spotting things, and reading the emotional state of other people.
- **Perform (Untrained):** Exhibit some performative skill. Roll it to dance, sing, orate, act, or otherwise put on a convincing or emotionally moving performance.
- **Pilot (Level 0):** Use this skill to pilot vehicles or ride beasts. Roll it to fly spaceships, drive vehicles, ride animals, or tend to basic vehicle repair. This skill doesn't help you with things entirely outside the scope of your background or experience, though with some practice a PC can expand their expertise.
- **Program (Untrained):** Operating or hacking computing and communications hardware. Roll it to program or hack computers, control computer-operated hardware, operate communications tech, or decrypt things.
- **Punch (Untrained):** Use Punch as a combat skill when fighting unarmed. If your PC means to make a habit of this rather than as a recourse of desperation, you should take the Unarmed Fighter focus described later.
- **Shoot (Untrained):** Use Shoot as a combat skill when using ranged weaponry, whether hurled rocks, bows, laser pistols, combat rifles, or ship's gunnery.
- **Sneak (Untrained):** Move without drawing notice. Roll it for stealth, disguise, infiltration, manual legerdemain, pickpocketing, and the defeat of security measures.
- **Stab (Untrained):** Use Stab as a combat skill when wielding melee weapons, whether primitive or complex.
- **Survive (Untrained):** Obtain the basics of food, water, and shelter in hostile environments, along with avoiding their natural perils. Roll it to handle animals, navigate difficult terrain, scrounge urban resources, make basic tools, and avoid wild beasts or gangs.
- **Talk (Level 0):** Convince other people of the facts you want them to believe. What they do with that conviction may not be completely predictable. Roll it to persuade, charm, or deceive others in conversation.
- **Trade (Untrained):** Find what you need on the market and sell what you have. Roll it to sell or buy things, figure out where to purchase hard-to-get or illicit goods, deal with customs agents, or run a business.
- **Work (Untrained):** This is a catch-all skill for professions not represented by other skills. Roll it to work at a particular profession, art, or trade.

Notes

Roy Kertzmann was born into the sprawling underworld of the galaxy, where the line between legal and illicit was a blur. Growing up on the rugged, industrial mining moon of Telyx-7, Roy was always surrounded by machines, scraps, and broken tech—stuff that others saw as junk, but he saw as treasure. His father was a mechanic and his mother, a hacker, which meant that Roy was trained from an early age to fix things, tinker with them, and, most importantly, create things that shouldn't exist. But while his parents stuck to the legal boundaries of their trades, Roy was always more inclined to look at the gray areas of the universe, where the laws were just suggestions and a few credits could get you anything.

.He was known as the guy who could make anything out of seemingly nothing—a master of creating machines that defied both logic and gravity. However, the true nature of Roy's talents wasn't just his ability to craft, it was his skill in obtaining forbidden parts and black market technology. He became a dealer of illicit goods—parts that were too dangerous or classified for the common buyer, but perfectly useful for someone with the right expertise.

But Roy wasn't just some shady trader. He had a deeper, more secretive purpose. Beneath the flashy exterior of the quick-talking, charm-laden dealer, Roy was a man obsessed. He had a plan, a vision, a dream that no one knew about—except for the mysterious tattoo etched into his arm. "K3fILP." A string of numbers and letters that only Roy understood. It was the key to something big, something revolutionary, but its true meaning was locked away in his mind. His goal was to create a machine—something that could alter the course of history, but exactly what it was, he refused to share with anyone. Not even his closest allies, and certainly not the various ladies who found him irresistible.

Roy had learned the art of manipulation at a young age. He could talk his way out of any situation and convince people to give him exactly what he wanted. His silver tongue was his most powerful weapon, and he used it to charm, deceive, and manipulate his way through the galaxy. Whether it was bartering with crime lords or convincing a space station's commander to overlook a few "questionable" transactions, Roy always managed to come out on top. His ability to talk circles around people made him a beloved figure in the underworld, and his charm only amplified that reputation. Women adored him, men respected him, and even those who hated him couldn't deny that Roy Kertzmann always got what he wanted.

What kept Roy driven was his quest for the rarest alloy known in the galaxy—a material that would allow him to complete his machine. The alloy was a closely guarded secret, and its origins were lost to time. Roy wasn't sure which galaxy it was hidden in, but he knew he would recognize it when he saw it. He had heard rumors of its existence, whispers in the corners of space stations, but no one knew exactly where it could be found. He would travel to the ends of the universe, crossing dangerous territories and battling hostile factions, all in the pursuit of this one material.

Despite his skills in creation, repair, and trade, Roy's machines were often unreliable. He could craft an intricate piece of machinery in hours, but whether it would last a day, a week, or a year—only time would tell. That's what made his creations so enigmatic. No one could predict how long they would hold up, and that mystery gave Roy an edge. His devices were works of genius, but they were often unpredictable. But for Roy, it wasn't about the lasting power of his creations—it was about the thrill of creating something new, something never seen before.

Roy's world was one of risk, excitement, and uncertainty. He knew he couldn't stay hidden forever. Sooner or later, someone would catch wind of his plans or get too close to uncovering the truth behind K3fILP. But until that time came, Roy would continue his journey across the stars, securing the parts he needed, keeping his plans hidden, and living life at full throttle. After all, with his charm, wit, and unrivaled technical brilliance, who could stop him?
